

How to Supercharge Your Productivity with These 7 Phone Features

1) Single Number Convenience

You can arrange it such that the person you call from your mobile sees your office phone number and you can prevent them from seeing your mobile phone number.

2) Any Device

Accession unified communications lets you call, receive and transfer calls, upgrades calls to video, and integrates contacts on any device.

3) Transfer Whenever You Want

Did you sit at your desk for a conference call and have it run long?

Transfer it to your mobile so you can still listen in while you're on your way to your next meeting.

4) Share Documents

Set up a whiteboard while you're on a conference call so everyone can see a shared set of notes, or share a document with the group.

5) Chat

Shoot a quick message to any contacts on the corporate directory and rest assured they'll see it, no matter what device you're using and what device they're using.

6) Visual Voicemail

Have one message centre for voice messages.

And listen, delete, or respond to messages with the touch of a button.

7) Manage Calls

Accession makes it easy to put calls on hold and transfer, mute, record (where it's legal), and make three-way calls.
