

The upside of a hosted VoIP calling solution

1. CONSIDERABLE COST SAVINGS

Hosted solutions handle unlimited phone numbers and extensions virtually, at smaller incremental costs. And enjoy a predictable monthly pricing structure with significantly lower setup charges that works with your leaner business model.

2. UNBELIEVABLE FLEXIBILITY

Adjust easily to changing market demand. You can enable an automated attendant or virtual receptionist capable of greeting callers 24/7; route calls to appropriate extensions; and provide business information, promotional messaging, and special offers.

3. UNMATCHED SCALABILITY

A Hosted PBX solution eliminates any need for new lines to be installed or for support personnel to visit your premises. The power to add, move, and remove extensions is in your hands.

4. TIME RECOVERY

Moving to a hosted service frees up your time and your IT team's schedule so they can focus on implementing new digital processes that automate your operations, facilitate business operations, and expand your capabilities in the field.

5. FULL SERVICE SUPPORT

A Hosted PBX solution comes complete with hands-on support for your service provider. As software and hardware components of a Hosted PBX reside in the cloud and offsite, modifications can be made remotely, quicker, and more efficiently than any on-premises system.
